

# Remote Worker Protection

## Protecting your workers' data

#1 laptop, PC and remote data protection

In today's ever-changing, increasingly distributed workplace, we now see more employees working in remote environments. In fact, in the past 12 years, there's been a 159% growth in remote working with over 4.3 million remote workers in the US alone<sup>1</sup>. With advances in technology, a remote workforce can operate in a highly productive and efficient manner. However, workstations, laptops, desktops and tablets contain highly valuable information that needs to get backed up in case of data loss, corruption or disaster. Does your company have a backup strategy for those remote devices? Veeam® offers many tools to help protect and optimize your remote workforce while keeping you in control.

## Over 80% of remote workers use Microsoft Windows

With Microsoft Windows being such a leader in the laptop and desktop operating system world, protecting those Windows machines is paramount. Veeam has a solution for protecting your workforce's laptops, desktops and other endpoint devices that run Microsoft Windows. Veeam Backup & Replication™ includes capabilities that protect not only your virtualized environments but also physical devices and cloud workloads. Ensuring your company's data and operation continue smoothly and safely, Veeam Backup & Replication has a perfect solution to back up and recover your fleet of Windows-based endpoint devices with ease. Best of all, businesses like yours can centrally manage endpoint protection directly. Unlock this capability with Veeam Agent *for Microsoft Windows*, which is a fully integrated part of Veeam Backup & Replication. Customers can purchase Veeam Backup & Replication with the Veeam Universal License (VUL), sold in bundles of 10 licenses. Each license can protect up to three endpoint devices.

## Linux support

Some employees may run Linux too, utilizing this platform for a home lab or a DIY storage device. Veeam Backup & Replication provides them with the same security blanket. Just like for Microsoft Windows, Veeam Agent *for Linux* supports the latest Linux distros.

## Safeguard remote Office 365 data

Microsoft Office 365 is enabling remote workers to remain productive and connected when working from home or other remote locations. With the remote worker trend increasing, businesses now more than ever are storing, sharing and accessing data within Microsoft Teams and OneDrive for Business, as well as Exchange and SharePoint Online. Companies also need to ensure this critical data is protected from permanent deletion or corruption. Veeam Backup for Microsoft Office 365 eliminates the risk of losing access and control over your remote user's Office 365 data so that it's always protected and accessible.

## What about your network?

Staying connected is critical for remote employees to remain productive. Even with today's high-speed internet connection, businesses must ensure that their remote connections are safe. Business operations need to stay confidential and protected from intruders. Fortunately, Veeam is here to help keep your connection safe within daily business activities and remote backup traffic. Veeam PN, a free, web-based virtual private network (VPN), is designed to make your connection secure with the lowest possible management overhead.

## Get started with Veeam

No matter how distributed and remote your workforce, Veeam solutions help you remain productive and in control. Keep your fleet of end-user devices backed up and protected with secure connections so you can ensure confident recovery of data, even in the face of a disaster. Many of these solutions fully integrate with our flagship products, Veeam Backup & Replication and Veeam Availability Suite™, further reducing the hassle and time in onboarding new solutions. Most Veeam products utilize the portable VUL, enabling you to protect the workloads you need when, and where, you need them. Protect virtual machines, cloud workloads, applications and even your remote workers' physical Windows and Linux-based devices with ease with VUL.
